

DRADURA Wire Mind Loop

One move changes everything

Meet the DRADURA anti-stress puzzle! Simple challenge designed to engage your mind and spark your curiosity.

Three connected pieces make a tricky 3D puzzle.

Your task? Separate the triangular piece without bending anything and without using force. The secret lies in discovering the right sequence of movements. All it takes is a bit of ingenuity, patience, and curiosity. Once you find the solution, the loop comes apart surprisingly easily. Give it a try and see if you can crack the puzzle.

This original piece was designed by one of our Technical Specialist in Poland and is crafted from stainless steel wire offcuts generated during dishwasher basket production. Instead of going to waste, the material is transformed into an object with a second life. A perfect reflection of THE DRADURA WAY combining creativity, simplicity, and a responsible approach to manufacturing.

It's just a small glimpse of our creativity, but we're ready to support you far beyond that, partnering with you in your projects and production processes to turn ideas into smart, efficient solutions.

WARNING!

Using the DRADURA Wire MindLoop may cause the following side effects:

- sudden relief from everyday stress
- increased creativity and spatial thinking
- bursts of genuine fun
- an uncontrollable urge to "try just one more time"

Precautions

Keep within easy reach of your coworkers. Once solved, users may feel a strong urge to pass the puzzle along and see if others can do just as well.
